PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience delivering production software at B2B SaaS and fintech companies. Skilled at building the backend systems, APIs, and cloud infrastructure that power real products — and at connecting those products to the external tools and platforms businesses depend on. Known for taking full ownership of work, from early design through live deployment and ongoing support, and for translating business requirements into reliable, well-engineered solutions in close collaboration with non-technical stakeholders. Experienced in small, high-impact teams where everyone ships, supports, and is accountable. MSc in Artificial Intelligence and Computer Science with Distinction (Northeastern University London).

CORE SKILLS

Programming	Python, TypeScript, JavaScript, C
Frameworks	Django, FastAPI, Flask, React
Backend	REST API design, multi-tenant SaaS platforms, microservices, event-driven architecture, async processing (Celery, RabbitMQ, Kafka), OAuth 2.0, webhooks, system design
Cloud & DevOps	AWS, GCP, Azure, Docker, Linux, CI/CD, GitHub Actions
Data & Storage	SQL, NoSQL, data modelling, BigQuery, Firestore, S3
AI & Analytics	LLM applications, RAG pipelines, vector databases, Pandas, NumPy

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Jan 2026 – Present

Equali, London, UK

- Joined as the first backend engineer; built and ran the company's software platform end-to-end, working directly with the CEO to turn business goals into shipped product.
- Connected the platform to multiple external services — including e-commerce, payments, and accounting tools — managing everything from the initial design through testing, launch, and live support.
- Grew the platform's cloud infrastructure to handle 10× customer growth (from 2 to 20+ business clients) within six months, with no downtime or performance issues.
- Built a fully automated sign-up and onboarding flow so new customers could get started and set up payments without any manual involvement from the team.
- Built background data-processing systems to reliably import and handle large volumes of customer data (JSON and CSV files), cutting processing time and reducing manual effort significantly.
- Set up automated deployment pipelines and internal developer tooling that allowed the team to ship new features faster and with fewer errors.
- Covered on-call and production support for the live platform, responding quickly to incidents and keeping the system stable and reliable for customers.

Software Engineer II

Jan 2022 – Jan 2025

SmartQ (Compass Group), Bengaluru, India

- Led a team of backend engineers across multiple product workstreams on a large enterprise SaaS platform, coordinating delivery with product managers, designers, and QA.
- Designed and built a new cloud-based menu management system from scratch that allowed 100+ restaurant locations to manage all their menus in one place, with real-time updates and support for over 10,000 menu items.
- Built and maintained the core APIs used by hundreds of enterprise restaurant clients to run their day-to-day operations through a single platform.
- Delivered a seasonal menu planning feature — developed in close collaboration with business stakeholders — that allowed teams to plan and publish menus directly to restaurants, significantly reducing manual effort.
- Integrated the platform with enterprise business systems and covered on-call support, keeping the live product stable through monitoring and fast incident resolution.

Software Engineer

Apr 2021 – Oct 2021

Netenrich, Bengaluru, India

- Built backend services and APIs that supported internal operations and business workflows.
- Created automated reporting dashboards that gave business teams real-time visibility into key performance metrics, removing the need for manual data pulls.
- Built data pipelines that improved data accuracy and cut the time it took to generate reports.
- Delivered automation tools that removed repetitive manual tasks for multiple teams across the business.

System Engineer

Oct 2020 – Apr 2021

Infosys, Bengaluru, India

- Built and maintained backend APIs for a tax compliance application that connected securely to government systems.
- Automated tax processing workflows by implementing validation rules and data-processing logic, reducing manual errors and improving reliability.
- Worked with cross-functional teams to fix live issues, improve performance, and deliver features on schedule in an Agile environment.

PROJECTS

AIDSAA: Automated Iterative Debugging and Self-Auditing Assistant 2025

- Built an AI-powered system that automatically finds and fixes bugs in code, using large language models (LLMs) and retrieval-augmented generation (RAG) to make the smallest possible change to broken code.
- Achieved 80%+ accuracy in preserving original code structure versus a 50%+ baseline, significantly reducing unintended side-effects from automated repairs.
- Work was well received academically; currently co-authoring a research paper for publication.

EDUCATION

MSc, Artificial Intelligence and Computer Science *Jan 2025 – Dec 2025*
 Northeastern University London Distinction

B.E., Computer Science *2016 – 2020*
 Dr. Ambedkar Institute of Technology, Bengaluru CGPA: 8.2/10

AWARDS & RECOGNITION

- Winner, Northeastern University London Entrepreneurship Bootcamp – awarded £1,500 in startup funding.
- Above and Beyond Award – recognised for exceptional ownership and product contribution at SmartQ.
- Menu Themes Award – recognised for leading successful product delivery.
- Certificate of Appreciation – awarded for enterprise integration delivery and cross-team impact.
